

Notes from Operators Conference Call

Data: 1/25/08 at 10-10:30 am

Participants:

Hugh Roarty - Rutgers
Adam Houk - UConn
Teresa Garner - ODU
Jeremy Turner - Stevens
Phil Muscarella - UDel
Jeff Lee - NASA
Chris Jakubiak - UMass

Everyone made a brief description of how they make trips out to the sites and what equipment they have available. UConn and NASA have to take boats to 2 of their sites and they have small boats they can trailer and take to the site. Most groups use personal vehicles when visiting the site and get reimbursed for the mileage. Rutgers has a van and the mileage on the van can get charged to grants.

We took a survey of who is sending their radials to the national server.
The only sites not yet up are the 2 western long island sound sites (but the process has started) and the Nauset site.

We decided to add a QA/QC section to the advanced training workshop, February 18-22. We currently have 11 people signed up with 4 people coming from Codar for a total of 15.

All 26 sites are in the database and attached is a summary of certain parameters.
